

Print analysis

Get an overview of your print, scan, copy and fax costs!

Get an overview of how the company's printers are used and gain valuable information about how they can be optimized and save cost.

Many companies have a machine park to print, scan, copy and fax, which is run down and no longer current with respect to the needs of the business.

We have all gained a greater focus on the environment - today we not only think about power but also on a sustainable printer estate, which is ready for future demands. There should be less printed on paper and it should be used on both sides - that is good economy.

Let JetAdvice 2.0 help you take the right decisions.

„One size“ – don't fit all!

The various vendors in the market have different agendas when they are highlighting their own products.

Printer suppliers support having a printer close to every user.

The Copier supplier is seeking a solution where all pages are gathered on central units.

Both solutions can and will often be right. But how do you create an overview to make the right decisions, or over time, to move the estate around a bit, so the small printer is where there is a small need, and the bigger Multi-Function Device (MFD) is placed where most of the pages are produced.

With a JetAdvice 2.0 print analysis, and continuous monitoring, you can ensure that each device is used optimally.

Supplier independent

In addition, JetAdvice 2.0 is vendor independent, giving you the greatest potential.

We have already collected more than 100 standard pieces of information on more than 1000 different printers and copiers - all to get a true picture of what you are really spending!

Standard information is for example:

- Date of introduction
- Size
- Weight
- Power Consumption
- Print language: PCL, PostScript, PDF etc.

By using our knowledge and looking at the volume of consumables that you use, we can make a very informed print analysis. As JetAdvice 2.0 incorporates information from most of the current print vendors, you can be assured of an objective analysis!

With JetAdvice you have access to the expertise you need, to get help with the many challenges. Automation is the key to solve your challenges in print, scan, copy and fax.

About EuroForm..

EuroForm A/S is an independent software development company, based in Denmark. We are committed to adding true value to customers through providing second-to-none solutions that

optimize and enhance the use of laser printers and multifunction devices. EuroForm A/S is one of the first printer software developers to offer innovative solutions in the cloud.
