

Maintenance

JetAdvice Manager helps you maintain your printers.

Extend the life of the company's printers through fully automated maintenance.

Employees spend a lot of time on things that basically is not their responsibility. JetAdvice can stop it!

Many suppliers offer to maintain the printers before the break, but do you think they succeed?

Often the answers we hear that it has not gone quite as good as promised! But why not? A good guess is that error message was not passed to the right person.

It requires no technical skills to keep the printer healthy, but not everyone has the opportunity. JetAdvice keeps a watchful eye on many different things in printers and photocopiers.

A standard printer log only a few errors, and then deletes the oldest. JetAdvice logs all errors that occurs, so you can always go back in history and find information from a particular day. You can set up rules, which allows you to make proactive maintenance.

As with all other technical equipment is economical to schedule maintenance before damage is done. This predictive behavior allows the printer to live longer!

About EuroForm..

EuroForm A/S is an independent software development company, based in Denmark. We are committed to adding true value to customers through providing second-to-none solutions that

optimize and enhance the use of laser printers and multifunction devices. EuroForm A/S is one of the first printer software developers to offer innovative solutions in the cloud.
