

Toner ordering

Automize ordering of consumables!

The solution orders consumables automatically, when needed. This avoids the need to have huge amounts of toner in stock.

Toner, which stands next to the printer ready to be slotted in, costs companies a lot of money. When a cartridge is changed, you must order a new one, but who should do it, and how do you ensure that the right one is ordered?

Another manual process that does not bring any satisfaction to the customer or to the supplier.

JetAdvice downloads the status of the tonerlevels and sends the data to JetAdvice Manager. The status of the toner cartridges is reviewed automatically, and compared to an preset level for all units.

If the toner is running out, an e-mail is sent with all the data needed to create a toner order, typically including the printer information, delivery address, contact, contract number and product number, as agreed between the customer and the supplier.

Using real-time unit data, accurate, proactive toner ordering can be achieved.

It's not only toner but most of the other consumables that form part of the agreement, which are supported by JetAdvice!

About EuroForm..

EuroForm A/S is an independent software development company, based in Denmark. We are committed to adding true value to customers through providing second-to-none solutions that

optimize and enhance the use of laser printers and multifunction devices. EuroForm A/S is one of the first printer software developers to offer innovative solutions in the cloud.
